Drug
n
Drop

"Every pill matters!"

The Problem

The global problem that Drug n Drop addresses, concerns the pharmaceutical industry (valued at \$ 1,27 trillion) and in particular, the vast quantities of drugs that expire and get disposed remaining unused. This problem has significant economic, environmental and social impact as analyzed below.

The economic dimension of the problem is evidenced, first, by the enormous amount of unused medicines disposed worth over \$ 5 billion in the USA alone (Source: University of Chicago). Secondly, there is the environmental dimension, as 15% of the medications disposed are toxic for the environment (Source: WHO). Finally, there is a social dimension, because while medicines are disposed massively, over 5 billion people worldwide lack access to essential medicines (Source: UN).

The pyramid classifies the European countries into 3 Tiers based on 2 criteria, their operational efficiency on pharmaceutical waste management and public sensitivity. The aim is to show the extend of the aforementioned problem to each one of them.

Tier 3 consists of countries that score low on both criteria, while in Tier 2 there are countries that score high on only one of the criteria. Finally, Tier 1 consists of countries that score high on both criteria.

The Solution - Drug n Drop

The product of Drug n Drop is a **complete smart system** for the management of expired medicine, capable of collecting and processing data, thanks to integrated sensors and scanners. These data concern pharmaceutical waste (packages of expired drugs) of the organizations and helps them optimize the management of their medicines.

Drug n Drop's customers include **pharmaceutical manufacturers, end consumers, pharmacies, hospitals, nursing homes**, and any other organization that manages medicine on a large scale. Drug n Drop's smart bin is supported by the addition of mobile app, from which the entire system is controlled, reports are displayed, and the communication between the previous and next steps in the value chain take place. In this way, we not only provide a complete solution to the global problem of drug management, but also create environmental value, as less pharmaceutical waste ends up in nature, and social value, as we harmonize the global demand and supply of medicines and help the organizations that provide them to operate efficiently.

As for the system's **hardware**, it consists of a smart bin, equipped with a barcode scanner, to recognize each medicine. It also has a distance sensor, to continuously monitor the capacity of the smart bin and a humidity & temperature sensor, to inspect the internal condition of the bin. Moreover, the system has a weight sensor, for counting the number of tablets in the blisters of each pack and RFID based access control, that allows access only to authorized users. All of the above are coordinated by the integrated Arduino, which makes our bin smart, and shares the collected data with the Drug n Drop app, where it is analyzed and turns into useful reports.

The **software** part consists of the interactive user-friendly Drug n Drop mobile app, which allows authorized users to monitor the current status (capacity) of the smart bin and receive monthly and annual reports, with useful insights, that derive from the analysis of the organization pharmaceutical waste. Moreover, they have the ability to communicate with the previous stages of the value chain (e.g. drug manufacturers), in order to harmonize the demand with the supply of medicines, to optimize the management from the organizations-customers.

The same mobile app is also used by end consumers, who can use it to scan their expired medicines. If the scanned expired medicines are subsequently dropped of at a pharmacy and thrown into the Drug n Drop bin, they receive points based on the app's incentive system. Finally, the incentive system used is similar to Sweden's, which is one of the most successful in Europe.

HEALTH ACTION INTERNATIONAL

Our Operating Model

Market & Competition

Our target market

Pharmacies

Big Pharma

Competition

Mobile App

IoT Sensors

Data Analytics

S

Analytics provision, process automation, ESG compliance

W

High cost, many stakeholders, public sector barriers

O

Inefficiency of current practices, lack of integration in the SC

T

Changing local regulations, lack of public sensitivity

Our competitive advantage derives from the data analytics and leveraging real data from the pharmaceutical waste. It is essential for the pharmacies and pharma manufacturers, who manage medicine massively, to obtain information on the type and quantity of medicines that are disposed.

Marketing & Distribution Strategy

Pharmacies

Big Pharma

End Consumer

Product Characteristics

Pricing Strategy

Communication Strategy

Distribution Strategy

Smart Bin

- Materials: PP, PVC, HDPE
- Dimensions: 50 x 50 x 100cm
- HC-SR04 distance sensor
- AM2320 I2C temperature and humidity sensor
- Proficon Weight Sensor 1
- RFID based access control
- Barcode scanner (and back-end mini ERP)

App

- Monthly/annual reports
- Data per pharmacy and per medicine

Smart Bin

- 100 € per product
- "Try before you buy": Free installation and trial for the first month
- Low price, many customers

App

- 50 € per month
- First month free trial

Smart Bin

- Customer service via email, phone, website
- Customer service through the Salesforce platform
- Visits to pharmacies
- Leads creation in conferences

App

- Technical support
- Satisfaction surveys
- Proper usage report

Smart Bin

- 1 smart bin per pharmacy
- Could be more than 1 smart bin for other organizations
- Drug n Drop members install the smart bin
- Outsourcing of the collection of the smart bin's waste

App

- One administrative profile per pharmacy
- Google Play Store, App Store

Pharma Insights

- Quarterly reports
- Data per company and per medicine
- Data from 70 points (year 1)
- Real big data provision

Pharma Insights

- Annual subscription for quarterly reports
- Year 1 (2024): 10.000 €
- Year 2-3: 12.000 €
- Year 5-... : 14.000 €

Pharma Insights

- Pharmaceutical conferences
- Funding programs
- Bidding in competitions
- Participation in Bayer's Level Up hub program

Pharma Insights

- One Account Manager per 5 pharmaceutical manufacturers

App

- Rewards for disposing medicine monitored by QR Code scanning
- Display user's activity

App

- Free of charge

App

- Technical support
- Satisfaction surveys

App

- One profile per user
- Google Play Store, App Store

Sales per Revenue Stream

Financials

Expenses per Category

Profit

Investment required: 240.000€

Use of funds

Break-even point: end of 2nd year (2025)

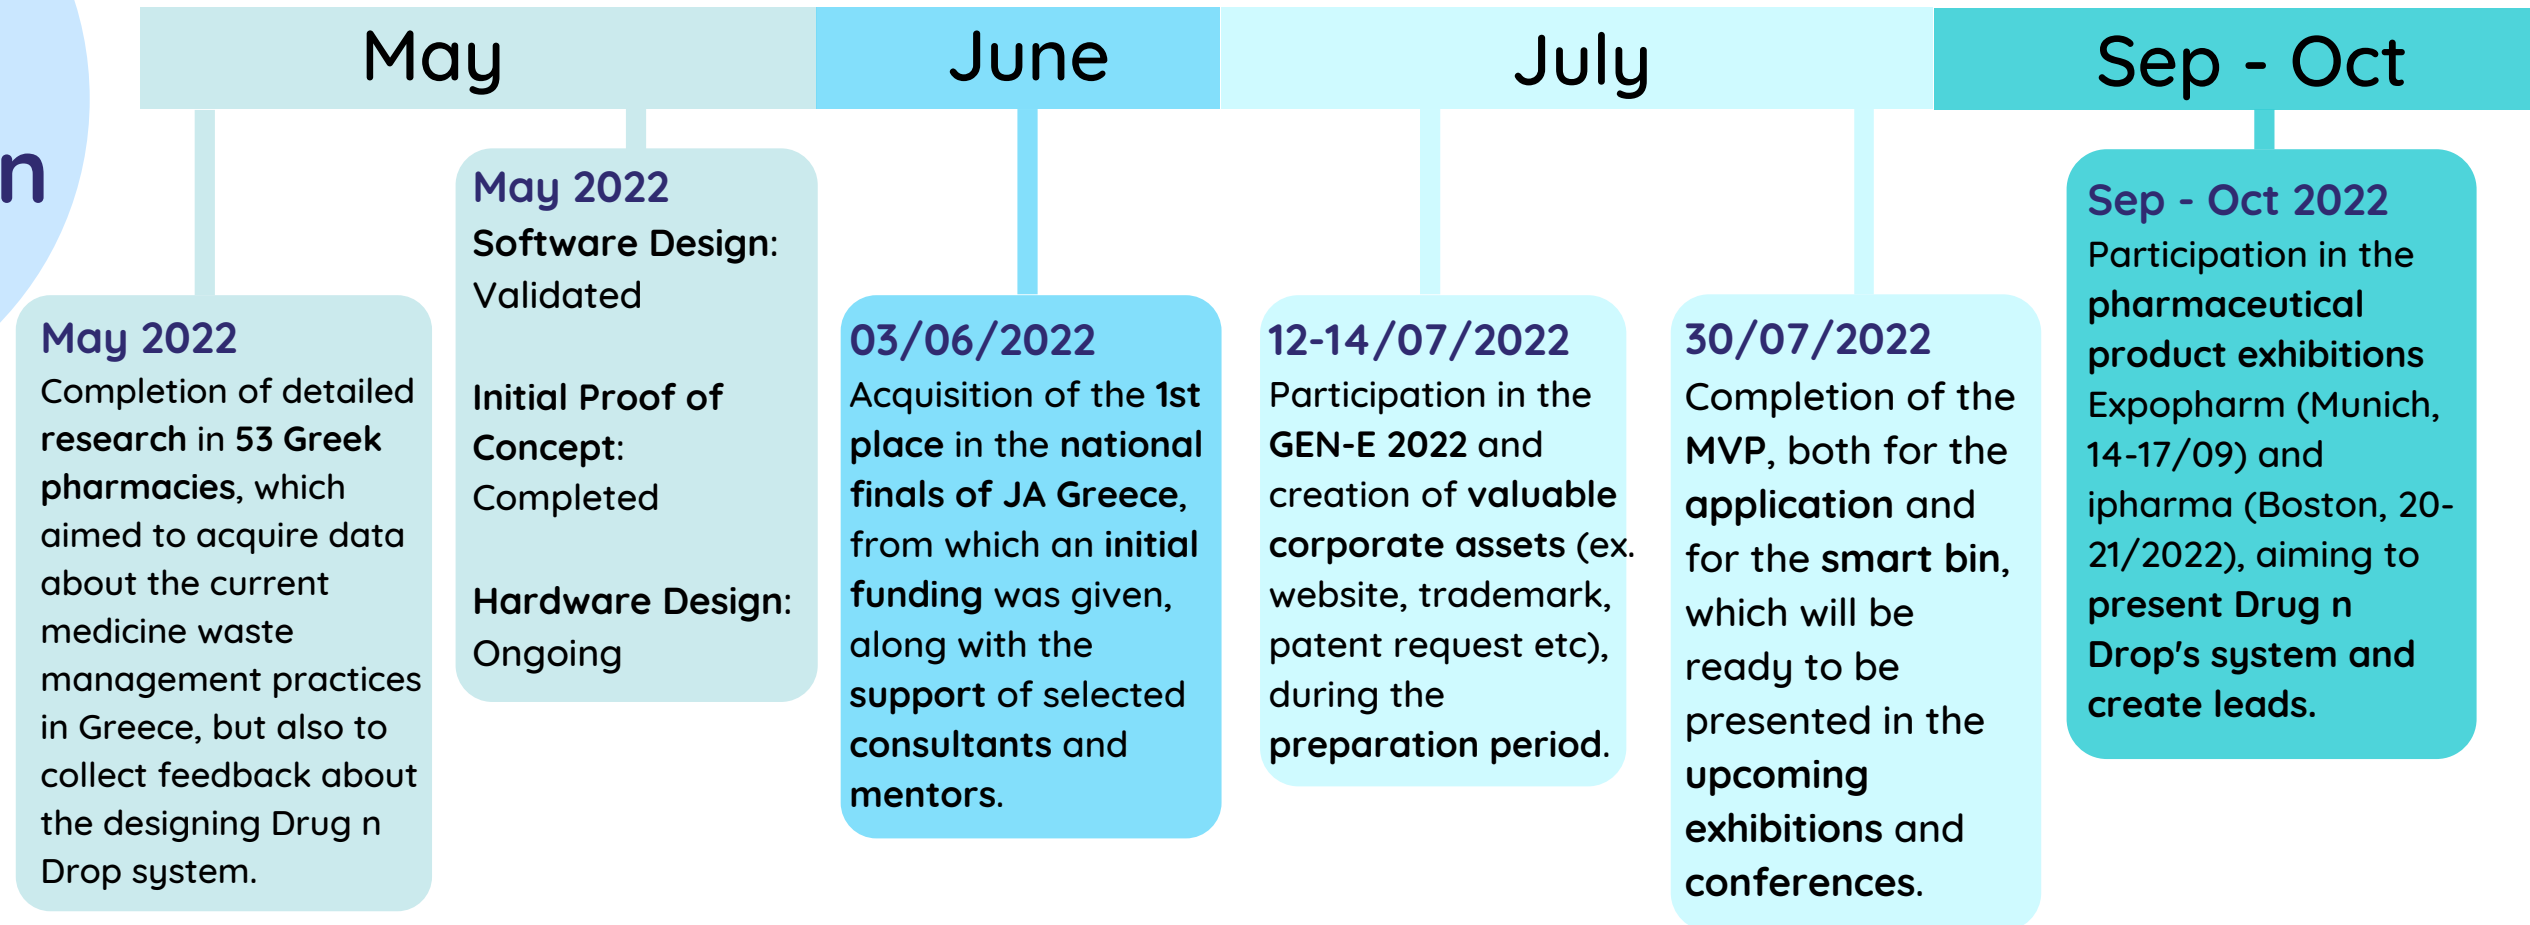

- 24 pharmaceutical manufacturers
- 600 pharmacies
- 762.338€ revenue

5-year vision (2027)

- 90 pharmaceutical manufacturers
- 2.250 pharmacies
- 9.6% Greek market share
- 2.25% European market share

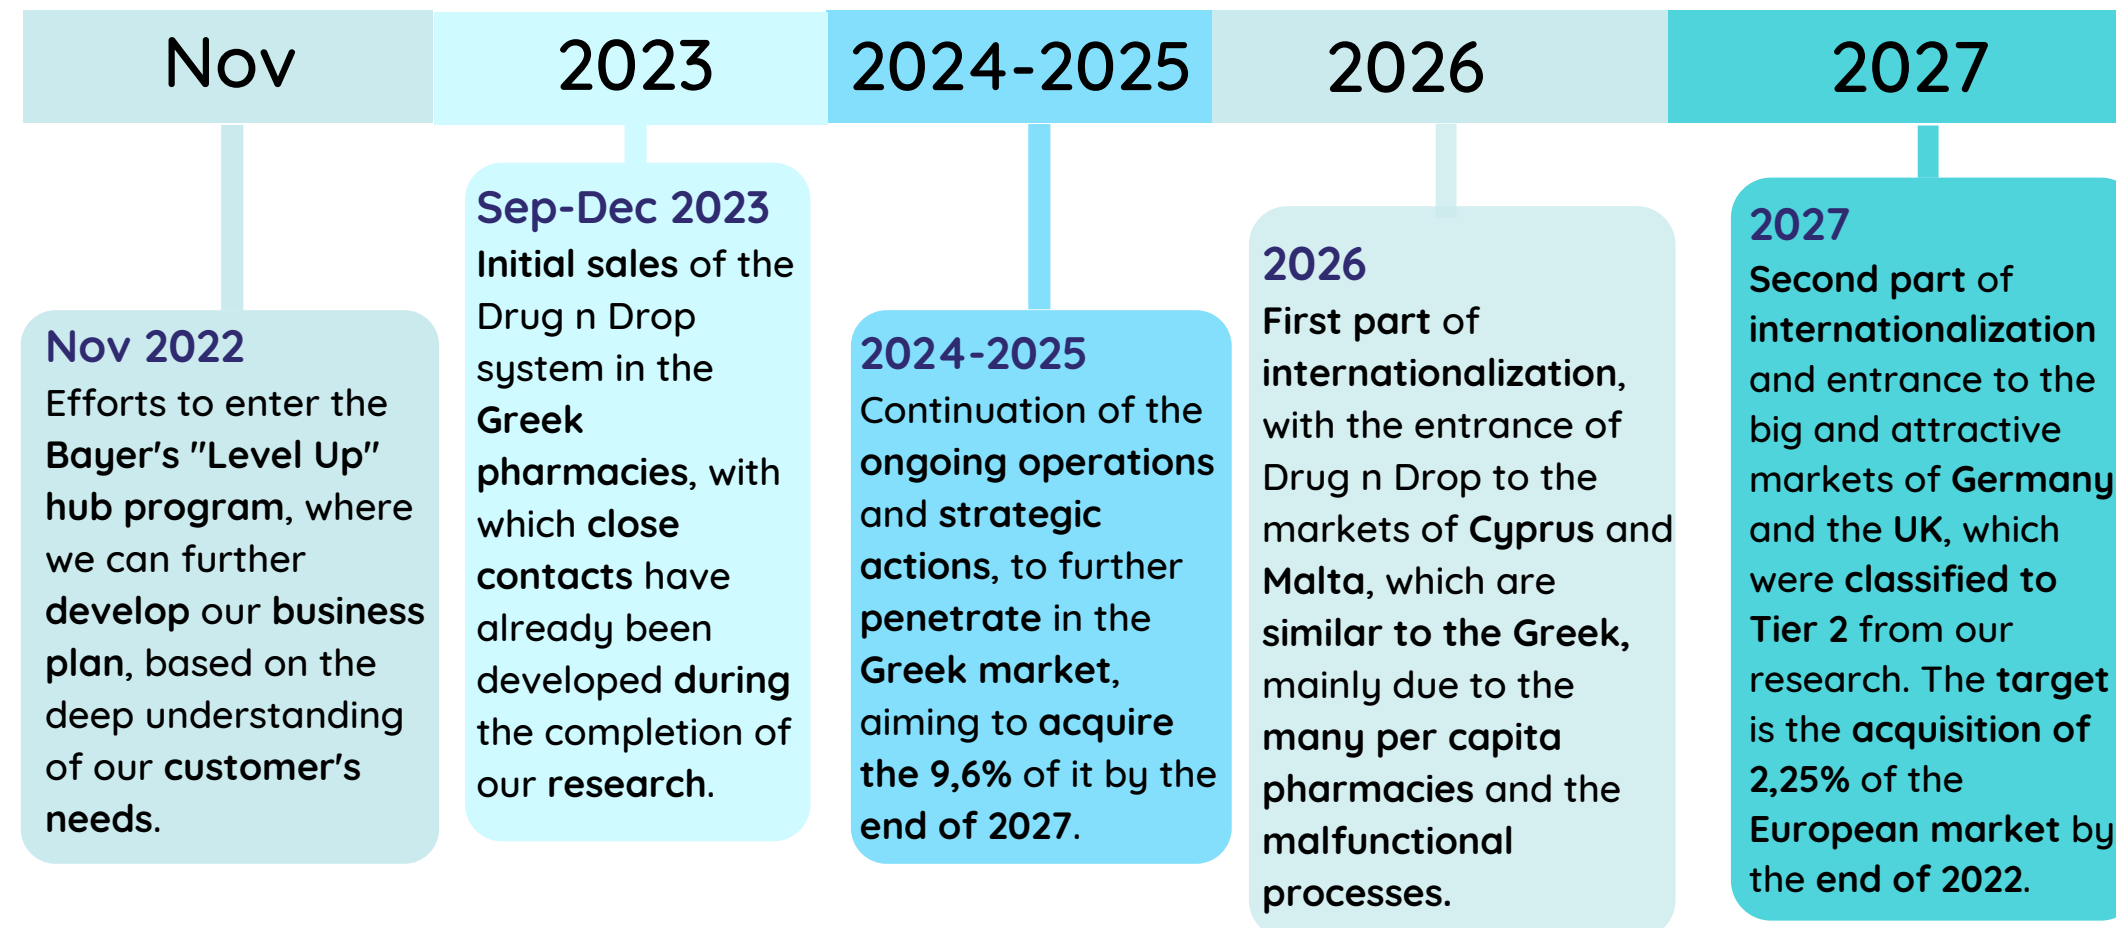

Timeplan

Stage 1: Preparation

Our Timeplan consists of 2 main parts. The first lasts 1 year and includes all the necessary steps for the development of Drug n Drop and its product, to the point where the company is ready to go to market.

Stage 2: Market Entering

The second is considered an estimation for the development of Drug n Drop's sales and target markets for the next 5 years. Finally, the Timeline is presented at a high level, containing only the key benchmarks, to provide an overview of the development of Drug n Drop.

Marketing Reasearch & Assumptions

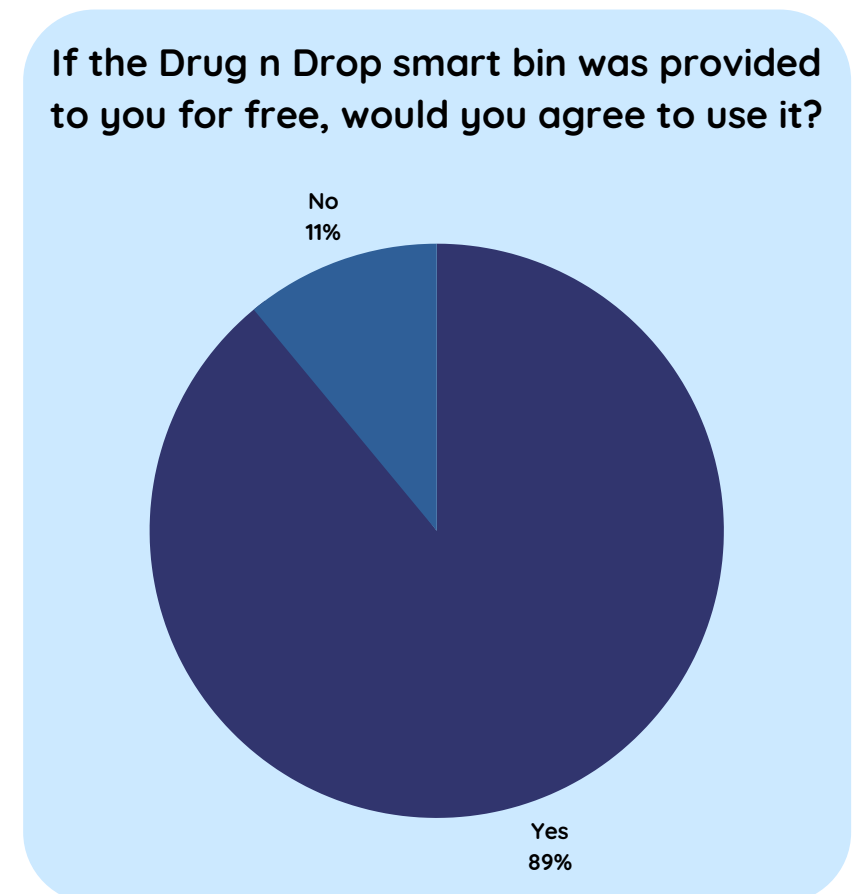

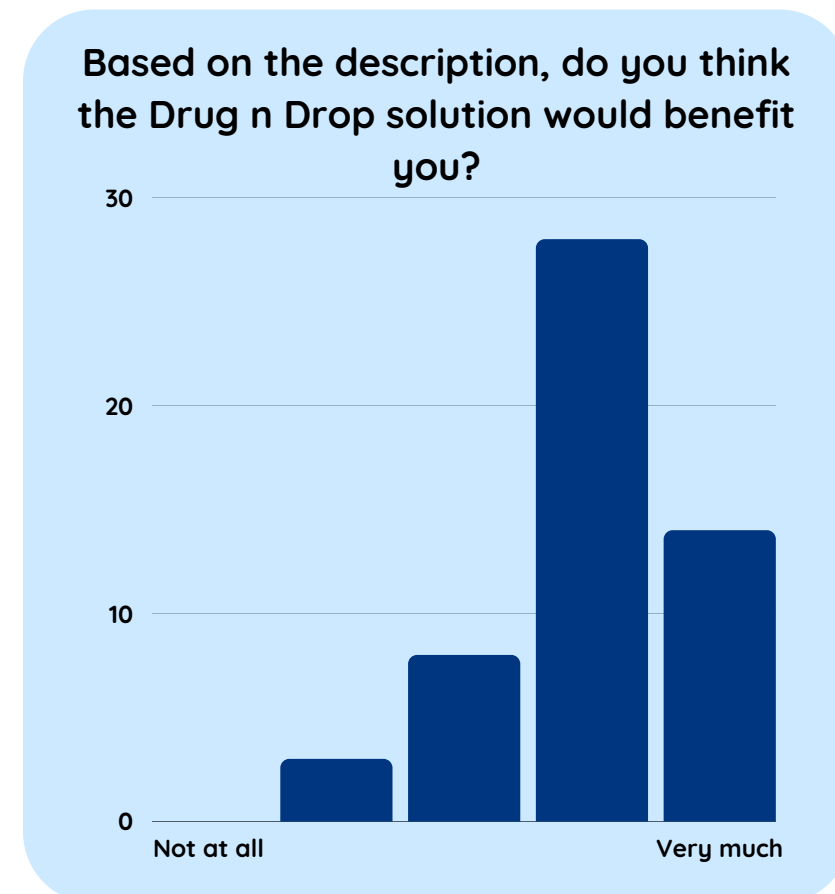

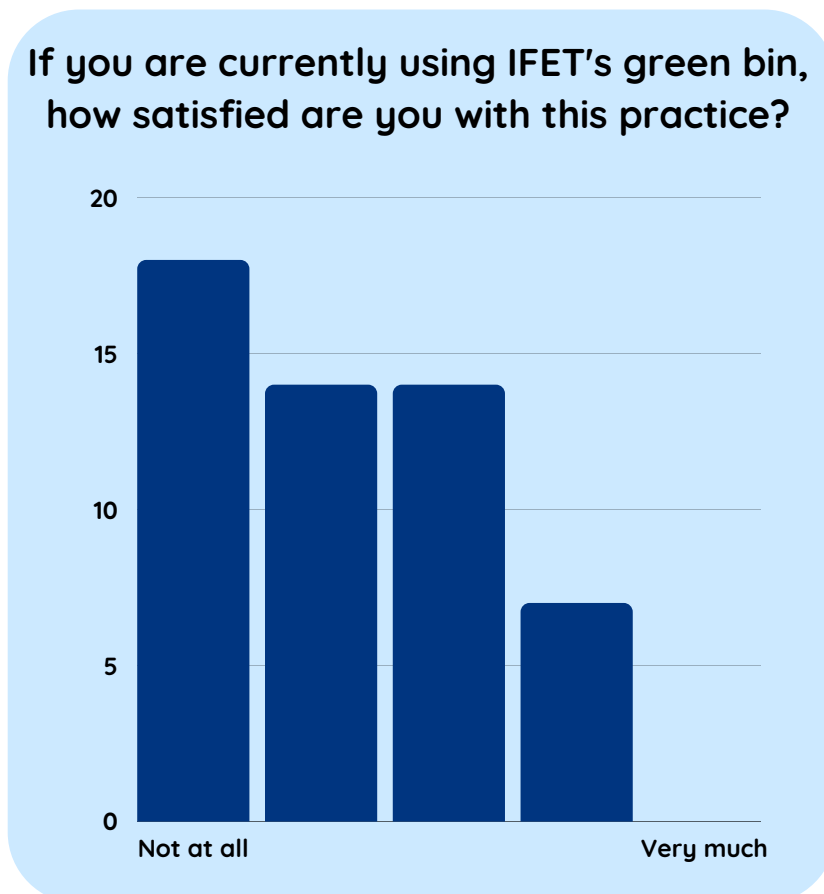

List of assumptions

Below you can see the results of our quantitative research in Greek pharmacies. The research occured under the following assumptions:

- 25% of medicines in Greece are wasted: Source IFET, confirmed with a qualitative analysis with 5 pharmacies
- 1 month to generate profit for the pharmacies: the first month of subscription is free (try before you buy service)
- The current business practice for pharmaceutical waste management in Greece is inadequate
- Only pharmacy owners were allowed to answer the questionnaire.
- Most pharmacies were in Athens and its suburbs.

Marketing research

Research methodology: Quantitative research with questionnaires, n = 53, Target audience: Greek pharmacies

Problems & how we solved them

Pricing Strategy

The definition of Drug n Drop's pricing strategy was initially hard to identify. To overcome that, we thought that as a big data firm, we need a lot of data from multiple points and that would be easier to achieve with low prices for the smart bins and subscriptions, but also with services "try before you buy".

Addition of weight sensor

One exception that was hard to handle was the accurate and automatic counting of remaining tablets in expired packs. The solution came from the Novartis jury during our the Digital Health Innovation Award interview, where we were suggested to add a weight sensor to our smart system.
